IDENTIFIERS *California; Latinas; *Latinos

ABSTRACT

This document reports on the results of five surveys conducted during the 1980s by the Field Institute and Los Angeles Times that included questions of particular interest to the Latino community. Between 1982 and 1989, 6,668 California residents participated in the 5 surveys. Surveys included questions addressing the impact of Latino immigration on California; amount of contact among members of different racial and ethnic groups; use of English as the official language; availability of non-English materials; cultural assimilation of immigrants; discrimination by and toward different racial and ethnic groups; personal experiences and satisfaction with life; perceptions of social and economic conditions for minority groups; and quality of education for minority groups. Two of the five surveys had a large number of Latino respondents and, therefore, provide a considerable amount of information concerning the attitudes of the Latino population. Entries break down the answers to survey questions along various demographic and political dimensions including race, age, sex, education, family income, political ideology, and party identification. Includes survey questions, an index, and a summary that was published separately. (LP)

The California Policy Seminar is a joint program of the University of California and state government to link systemwide University resources with state policy concerns. Through policy research and technical assistance components the Seminar sponsors research, conferences, seminars, and publications pertaining to public policy issues in California. The Seminar also administers the Latina/Latino Policy Research Program, established by the University to address policy concerns involving California's Latino/Latina population.

The Latina/Latino Policy Research Program is funded by the UC Office of the President in response to Senate Concurrent Resolution 43 (SCR 43, 1987), which requested the University to help coordinate California's efforts to address the "problems facing the state and the state's Hispanic population," and to initiate policy research efforts in such areas as health, education, employment, government participation, housing, welfare, etc.

The research on which this report was based was commissioned by the Latina/Latino Policy Research Program. The views and opinions expressed in this report are those of the authors and do not necessarily represent the California Policy Seminar, or the Regents of the University of California.

About the authors: Fredric C. Gey is a data archivist at UC DATA (Data Archive & Technical Assistance) at the Survey Research Center, UC Berkeley, and Benjamin Highton and J. Eric Oliver are research assistants there. Raymond E. Wolfinger, this project's principal investigator, is a professor of political science and director of UC DATA.

About the data: The data used to create the tables in the Data Book are available for analysis in the form of ASCII files, which contain all the data in the five surveys used in the data book. This Latina/Latino Public Opinion Computer Data File can be ordered on floppy disks and easily accessed with any IBM-PC- compatible statistical analysis program. The data may be ordered by contacting Fern Glover, UC DATA, 2358 Channing Way, Berkeley, CA 94720; (510) 642-2337.

Contents

Introduction	1

Introduction

California's decision makers must understand the perspectives of the state's Latino population. This need is particularly urgent in areas such as immigration, education, and multicultural relations, where sensitive and effective policymaking would be enhanced by knowledge of Latinos' and non-Latinos' beliefs. This data book and the data files it introduces are an attempt to meet this need.¹

Although Latinos were 18 percent of the California population in 1980 and grew to 26 percent of the population in 1990, there is relatively little information about the views of this group or attitudes toward them by other elements of the population. Moreover, surveys seldom ask questions about issues of particular concern to the Latino community. For example, of the approximately 80 surveys conducted over the past decade by the Field Institute and the *Los Angeles Times*, two organizations that regularly conduct statewide public opinion polls, only five have a significant number of questions about Latinos or questions of particular interest to the Latino community.

In addition, Latinos themselves are often underrepresented in public opinion polls. This results from several factors. The population surveyed for opinion polls often is limited to people who are eligible to vote, that is, individuals who are both citizens and over 17 years of age. Since the Latino population in California is disproportionately young and noncitizen, a greater percentage of Latinos are filtered out of survey samples compared to other groups. Also, most surveys are conducted by telephone. Latinos have relatively low income levels and therefore are less likely to have telephones in their homes, leading to the further exclusion of Latinos from opinion polls. As a result of these factors, conventional survey samples have proven to be an inadequate source for obtaining data on the attitudes of Latinos.

UC DATA (University of California Data Archive and Technical Assistance) produced this *Latina/Latino Public Opinion Data Book* and Computer Data File to begin filling the information gap on the attitudes toward and of Latinos. The data used for this project are the five surveys conducted in the 1980s by the Field Institute and *Los Angeles Times* that include questions of particular significance to the Latino community. Together, these surveys provide a wealth of information about attitudes toward Latinos and toward topics of particular interest to Latinos. Questions from these surveys include, but are not limited to, the impact of Latino immigration on California, contact with members of different racial and ethnic groups, the use of English as the official language, the availability of non-English materials, cultural assimilation of immigrants, and perceptions of discrimination by and toward different racial and ethnic groups.

This project also provides a considerable amount of information concerning the attitudes of Latinos. Two of the five surveys have a large number of Latinos. *Los Angeles Times* Poll #65 has a Latino oversample and *Los Angeles Times* Poll #172 used an unusually large sample which resulted in a large number of Latino respondents. Thus, despite the fact that the surveys were conducted by telephone, sampled the voting-age population, and consisted primarily of citizens

¹ These data have been used for various papers and articles. See, for example, Jack Citrin, Beth Reingold, and Donald P. Green, 1990, "American Identity and the Politics of Ethnic Change," *Journal of Politics*, 52:1124-1155, or Jack Citrin, Beth Reingold, and Evelyn Walters, 1990, "The 'Official English' Movement and the Symbolic Politics of Language in the United States," *Western Political Quarterly*, 43:85-108.

(about 98 percent), these two polls provide satisfactory samples with which to assess the attitudes and experiences of California Latinos.

The Data Book presents much of the information and the Computer Data File permits further analysis of issues of particular interest to any user.

Surveys

California Poll #8801, February 1988

Population sampled: California telephone households

Number of respondents: 1,011

This survey elicited respondents' perceptions of the consequences of the increase in the number of Latinos in California. Respondents were asked how likely each of the following was as a consequence of increases in the number of Latinos: higher economic growth, lower quality of education, endangering the place of English as a common language, enrichment of California culture by new ideas and customs, an increase in crime, providing needed labor for new jobs, higher taxes due to more demands for public services, increasing the number of people anxious to work hard, and increasing the amount of unemployment.

Half the survey respondents were asked about this set of nine possible consequences of a growing Latino population; the other half were asked the same questions about Asians. Thus Californians' attitudes toward immigration of these two groups can be compared.

Respondents were also asked the importance of various factors "in making someone a true American." These included speaking and writing English and treating people of all races and backgrounds equally, along with belief in God, voting, trying to get ahead on one's own efforts, and defending America when it is criticized.

California Poll #8604, July/August 1986

Population sampled: California telephone households

Number of respondents: 1,028

Respondents were asked whether they had heard about Proposition 63 to declare English as the state's official language and how they intended to vote on it.

California Poll #8201, January 1982

Population sampled: California telephone households

Number of respondents: 1,015

Respondents were asked about documented and undocumented immigration, the use of English, whether immigrants make worse citizens than native-born Americans, and whether immigration should be increased, decreased or kept the same. They were also asked if immigrants should try to preserve their own languages, public information should be provided in Spanish or other languages, and citizens who cannot read English should be permitted to vote.

Questions were asked about the possible effects of undocumented immigration and what, if anything, should be done to discourage it.

Los Angeles Times Poll #172, January 1989

Population sampled: California telephone households

Number of respondents: 2,116

This survey includes relatively large numbers of four minority groups: Latinos, blacks, Jews, and Asians. Respondents were asked 60 questions on immigration, discrimination, attitudes toward different ethnic groups, personal experiences and satisfaction with life, and perceptions of social and economic conditions for the different groups.

Los Angeles Times Poll #65, February/March 1983

Population sampled: California telephone households

Number of respondents: 1,498

Respondents were asked about conditions of Latino life and the impact of Latino immigration. Non-Latinos were asked about their personal contact with Latinos, while Latinos were asked about personal contact with non-Latinos. Latino respondents were asked about the importance of preserving different aspects of Latino culture. These included holidays and celebrations, the Spanish language, Latino music, and Latino respect for the elderly.

Data Book Format and Contents

To illustrate the format of the Data Book, examples are taken from the table on page 7. The first entry, "All Respondents," presents the distribution of responses to a given question from everyone in the sample. The "total percent" line reports for all responses to the question. The "adjusted percent" line excludes respondents who had no opinion. Thus the 1% of respondents who answered "no opinion" are excluded from the calculations for the "adjusted percent" line. (Due to rounding, the percentages may not always add up to 100 in these and other entries.)

The remaining entries break down the answers along various demographic and political dimensions to show variation across groups. Each reported percentage is an adjusted percent. That is, only individuals who provided valid responses are considered. This explains why the number of Latinos, for example, will vary from question to question.

The general layout of all the tables in the Data Book is similar, though there are some differences in presentation which relate to the inclusion of unweighted data. Most of the tables are based on the weighted sample (weighted N). Both the weighted and unweighted samples are of the same size. However, by weighting the sample, one can correct for selection biases, and make the sample conform to census-established parameters. The weights, which are provided by the survey organizations, generally extend to several decimal places. A weight can affect the reported percentages. On page 41, for example, we report that 3% of the 23 individuals in the "other" race category responded "negative." If a single respondent was in that category, then one would expect to see 4% not the 3% that we report, since $1/23 = .043$. However, because of the weighting there are really .64 cases. Knowing this, the percentage appears correct, $.64/23 = .028$.

In tables obtained from *Los Angeles Times* Poll #172, weights are not always applied. For example, Asians and Jews were oversampled. Their opinions and attitudes of these two groups are reported in the "Oversampled Groups" entry and are unweighted. The remaining entries on all pages connected with this poll are based on the weighted sample. In addition, weighting was not used in tables based only on Latino respondents. Because the reported percentages are not based on the entire sample, but on a specific subsample, the weight has not been used.

Another substantive difference between the California Polls and the *Los Angeles Times* surveys included in this data book arises in interviewing. California Polls used only English-speaking interviewers and thus excluded Spanish-speaking persons who might have answered the telephone. The *Los Angeles Times* Poll employed bilingual interviewers and hence their universe includes

respondents who could only answer in Spanish. Neither polling organization uses interviewers who can speak Asian languages, so the polling universe excludes individuals who might have answered the phone but could speak neither English nor Spanish.

One final note concerns sampling error. It is important to remember that in any survey the reported results are estimates of the opinions of the sampled population. One factor that affects the precision of the estimates is sample size. The greater the number of respondents used to calculate a percentage, the more confidence one has that the percentage is close to the true value for the entire population. As a very general guide, percentages based on large sections of any of these samples are subject to a sampling error of 3%; that is, if the table shows that 50% of a large group has a certain position, the "real" position is almost surely somewhere between 47% and 53%. As the number of respondents declines the margin of error increases, and therefore a difference between groups of respondents would have to be larger before one could prudently conclude that a "real" difference existed.

Data File Format

Through the generosity of The Field Institute and The Los Angeles Times, the data used to create the tables in the Data Book are available for further analysis in the form of ASCII files which contain all the data in the five surveys used in preparing this Data Book. For a cost of \$25, this Latina/Latino Public Opinion Computer Data File can be ordered on IBM-PC-compatible floppy disks to be used with standard statistical analysis programs. The data may be ordered by contacting Fern Glover, UC DATA, 2538 Channing Way, Berkeley, CA 94720; (510) 642-2337.

Source: California Poll, February 1988.

Because of immigration and other factors, the population of California is rapidly changing to include many more people of Hispanic and Asian background. Some people are worried that the changing makeup of California will make it hard to maintain American traditions and the American way of life. Others say this is not a problem and that these groups quickly adapt. How about you? Would you say that you are very worried, somewhat worried or not at all worried about this?

In recent years there has been a number of refugees leaving their own country--such as Vietnam, Cuba, Haiti, the Soviet Union, and Central America--because of political or economic reasons or because of discrimination against their race or religion, and many have been allowed to come to this country.

Do you approve or disapprove of allowing refugees in to the United States from Vietnam? (V98)

Some people say prejudice is something we are taught--we learn it from our families or friends or from the neighborhood where we grew up. Other people say prejudice is a personality trait--a sense of inferiority that makes some of us try to dominate others. Still other people say prejudice is something we are born with--an instinctive reaction that protects society from outsiders who might be dangerous. What do you think? Is prejudice something we are taught, or a personality trait, or is prejudice something we are both with, or what? (V63)

Latino Respondents Only

In your opinion, what causes prejudice? Some people say prejudice is something we are taught--we learn it from our families or friends or from the neighborhood where we grew up. Other people say prejudice is a personality trait--a sense of inferiority that makes some of us try to dominate others. Still other people say prejudice is something we are born with--an instinctive reaction that protects society from outsiders who might be dangerous. What do you think? Is prejudice something we are taught, or a personality trait, or is prejudice something we are both with, or what? (V63)

Latino Respondents Only

At the present time, do you think there are too many immigrants in this country from Mexico...or too few...or do you think there are about the right amount of immigrants in this country from Mexico--or haven't you heard enough about that yet to say? (V88)

THE CALIFORNIA POLICY SEMINAR
IS A JOINT PROGRAM OF THE
UNIVERSITY OF CALIFORNIA
AND STATE GOVERNMENT

LATINA/LATINO PUBLIC OPINION DATA BOOK

Benjamin Highton, J. Eric Oliver, Fredric C. Gey,
and Raymond E. Wolfinger

California's decision makers must understand the perspectives of the state's Latino population. This need is particularly urgent in areas such as immigration, education, and multicultural relations, where sensitive and effective policymaking would be enhanced by knowledge of Latinos' and non-Latinos' beliefs. This data book and the data files it introduces are an attempt to meet this need.¹

Although Latinos were 18 percent of the California population in 1980 and grew to 26 percent of the population in 1990, there is relatively little information about the views of this group or attitudes toward them by other elements of the population. Moreover, surveys seldom ask questions about issues of particular concern to the Latino community. For example, of the approximately 80 surveys conducted over the past decade by the Field Institute and the Los Angeles Times, two organizations that regularly conduct statewide public opinion polls, only five have a significant number of questions about Latinos or questions of particular interest to the Latino community.

In addition, Latinos themselves are often underrepresented in public opinion polls. This results from several factors. The population surveyed for opinion polls often is limited to people who are eligible to vote, that is, individuals who are both citizens and over 17 years of age. Since the Latino population in California is disproportionately young and noncitizen, a greater percentage of Latinos are filtered out of survey samples compared to other groups. Also, most surveys are conducted by telephone. Latinos have relatively

The views and opinions

California Policy Seminar
or the Regents of the
University of California.

¹ These data have been used for various papers and articles. See, for example, Jack Citrin, Beth Reingold, and Donald P. Green, "American Identity and the Politics of Ethnic Change," *Journal of Politics* 52: 1124-1155 (1990), or Jack Citrin, Beth Reingold, and Evelyn Walters, "The 'Official English' Movement and the Symbolic Politics of Language in the United States," *Western Political Quarterly* 43: 85-108 (1990).

RC-019847

low income levels and therefore are less likely to have telephones in their homes, leading to the further exclusion of Latinos from opinion polls. As a result of these factors, conventional survey samples have proven to be an inadequate source for obtaining data on the attitudes of Latinos.

UC DATA (University of California Data Archive and Technical Assistance) produced this Latina/Latino Public Opinion Data Book and Computer Data File to begin filling the information gap on the attitudes toward and of Latinos. The data used for this project are the five surveys conducted in the 1980s by the Field Institute and Los Angeles Times that include questions of particular significance to the Latino community. Together, these surveys provide a wealth of information about attitudes toward Latinos and toward topics of particular interest to Latinos. Questions from these surveys include, but are not limited to, the impact of Latino immigration on California, contact with members of different racial and ethnic groups, the use of English as the official language, the availability of non-English materials, cultural assimilation of immigrants, and perceptions of discrimination by and toward different racial and ethnic groups.

This project also provides a considerable amount of information concerning the attitudes of Latinos. Two of the five surveys have a large number of Latinos. Los Angeles Times Poll #65 has a Latino oversample and Los Angeles Times Poll #172 used an unusually large sample which resulted in a large number of Latino respondents. Thus, despite the fact that the surveys were conducted by telephone, sampled the voting-age population, and consisted primarily of citizens (about 98 percent), these two polls provide satisfactory samples with which to assess the attitudes and experiences of California Latinos.

The Data Book presents much of the information and the Computer Data File permits further analysis of issues of particular interest to any user.

Surveys

- *California Poll #8801, February 1988*
Population sampled: California telephone households; number of respondents: 1,011

One set of questions from this survey tapped respondents' perceptions of the consequences of the increase in the number of Latinos in California. Respondents were asked how likely each of the following was a consequence of increases in the number of Latinos: higher economic growth, lower quality of education, the place of English as a common language being endangered, California culture being enriched by new ideas and customs, an increase in crime, providing needed labor for new jobs, higher taxes due to more demands for public services, increasing the number of people anxious to work hard, and increasing the amount of unemployment.

Half the survey respondents were asked about this set of nine possible consequences of a growing Latino population; the other half were asked the same questions about Asians. Thus Californians' attitudes toward immigration of these two groups can be compared.

Respondents were also asked the importance of various factors "in making someone a true American." These included speaking and writing English and treating people of all races and backgrounds equally, along with belief in God, voting, trying to get ahead on one's own efforts, and defending America when it is criticized.

- *California Poll #8604, July/August 1986*
Population sampled: California telephone households; number of respondents: 1,028

Respondents were asked whether they had heard about Proposition 63 to declare English as the state's official language and how they intended to vote on it.

- *California Poll #8201, January 1982*
Population sampled: California telephone households; number of respondents: 1,015

Respondents were asked about documented and undocumented immigration, the use of English, whether immigrants make worse citizens than native-born Americans, and whether immigration should be increased, decreased or kept the same.

Respondents were also asked if immigrants should try to preserve their own languages, public information should be provided in Spanish or other languages, and citizens who cannot read English should be permitted to vote.

Questions were asked about the possible effects of undocumented immigration and what, if anything, should be done to discourage it.

- *Los Angeles Times Poll #172, January 1989*
Population sampled: California telephone households; number of respondents: 2,116

This survey includes relatively large numbers of four minority groups, Latinos, blacks, Jews, and Asians. Respondents were asked 60 questions on immigration, discrimination, attitudes toward different ethnic groups, personal experiences and satisfaction with life, and perceptions of social and economic conditions for the different groups.

- *Los Angeles Times Poll #65, Feb./March 1983*
Population sampled: California telephone households; number of respondents: 1,498

Respondents were asked about conditions of Latino life and the impact of Latino immigration. Non-Latinos were asked about their personal contact with Latinos, while Latinos were asked about personal contact with non-Latinos. Latino respondents were asked about the importance of preserving different aspects of Latino culture. These included holidays and celebrations, the Spanish

language, Latino music, songs, and Latino respect for the elderly.

How to Order

These data are available in two forms: 1) a book of more than 219 pages consisting mainly of tables, with an extensive contents list and index; and 2) as ASCII files on computer diskettes, which can be accessed easily by any IBM-PC-compatible statistical analysis program for further analysis.

State offices may order free copies of the book by phoning the California Policy Seminar at 510/642-5514. Others may order copies by sending a check to the Seminar, payable to the UC Regents, for \$20 per copy.

The Computer Data File (the data used to create the tables) may be ordered (at a cost of \$25) from Fern Glover, UC DATA, 2358 Channing Way, Berkeley, CA 94720 (telephone: 510/642-2337).

Interested parties are also welcome to obtain individual tables by visiting UC DATA and making copies from their files. Other University of California data centers or libraries where the material may be obtained are listed on the next page.

The research on which this report was based was commissioned by the Latina/Latino Policy Research Program, which is funded by the UC Office of the President. The program was created in response to Senate Concurrent Resolution 43 (SCR 43, 1987), which requested the University to help coordinate California's efforts to address the "problems facing the state and the state's Hispanic population," and to initiate research efforts in such areas as health, education, employment, government participation, housing, welfare, etc.

Fredric C. Gey is a data archivist at UC DATA (Data Archive & Technical Assistance at the Survey Research Center, UC Berkeley) and Benjamin Highton and J. Eric Oliver are research assistants there; Raymond E. Wolfinger is a professor of political science and director of UC DATA.

Abbreviated Contents List (# of tables)

California Poll #8801

- What makes a true American (6)
- Immigrants and quality of life (19)
- Special preference in hiring (5)
- Should non-English readers vote (1)
- Taxes for bilingual education (2)
- Hispanic growth positive or negative to you (1)
- Asian growth positive or negative to you (1)
- Special openings in colleges and universities (5)

California Poll #8604

- Heard about English as official state language initiative (3)

California Poll #8201

- Immigrants and citizenship (13)
- Attitudes toward illegal immigration (16)
- Refugees and citizenship (1)

Los Angeles Times Poll #172: General Population

- Has respondent experienced discrimination (1)
- Blacks and discrimination (3)
- Latinos and discrimination (3)
- Asians and discrimination (3)
- Residential attitudes and discrimination (11)
- Attitudes toward Anglos being outnumbered (1)
- Too many immigrants in Southern California (1)
- Have immigrants' lifestyles changed American way of life (1)
- Display of foreign-language signs in stores (1)
- foreign-language books in public libraries (1)
- Ethnic groups and economic/political power (6)
- Government paying enough attention to minorities (1)
- Towards whom do people feel least favorably (6)
- Rights of minorities (2)
- Understanding anger of minority groups (1)
- Govt. shown more respect to minorities than they deserve (1)
- Racial/religious disc. in jobs/promotions (1)
- Is prejudice taught (1)
- Where does most discrimination occur (1)
- Which groups are most discriminated against (1)
- Is discrimination more subtle than 10 years ago (1)

Los Angeles Times Poll #172: Latino Respondents Only
 Perceptions of discrimination/attitudes towards blacks, Asians, Latinos, Jews (21)
 Immigrants in Southern California (same Qs as above) (27)

Los Angeles Times Poll #65: General Population
 Conditions for Latinos (3)
 Have immigrants' lifestyles changed American way of life (1)

Los Angeles Times Poll #65: Non-Latino Respondents Only
 Respondent's feelings towards Latinos (6)
 Immigration and illegal aliens (8)

Los Angeles Times Poll #65: Latino Respondents Only
 Conditions for Latinos (3)
 Effect of Latino lifestyle on American lifestyle (1)
 Respondents' feelings about Anglos and Latinos (4)
 Latinos and policy (15)
